

Sugar Valley Farm & Refillery

What is a Refillery?

A refillery is an eco-friendly minimal-waste store where customers can purchase product by weight so they can get as much or as little as they need without costly or wasteful packaging.

Have you ever gotten matching spice jars or soap dispensers only to find yourself trying to figure out where to “hide” the bulky refill container or filling your trash with the store containers (producing extra waste)? At our refill store, you can bring your own containers and fill them, helping you keep your home organized with less clutter and more eco-friendly practices.

Have you seen apothecary recipes you want to try only to struggle to find the ingredients online or, when you do find them, you have to purchase a lot of product for a recipe that may or may not work - leaving you with herbs that were not only a waste of money, but are now wasting away in your cabinet? Here, if you only need one tablespoon, you simply purchase one tablespoon! Love your recipe? Come back and purchase as much as you want!

At our refillery, you reconnect with the earth - using plant-based, gentle cleaners, that are eco-friendly and reducing waste - save money, and organize your home.

How does it work?

Bring your own container or purchase one of ours.

We will tare (weigh) your container.

Fill your container with as much or as little of our products as you'd like.

Weigh your container with your product.

Only pay for your product.

Sugar Valley Farm & Refillery

- Neem Oil
- Rice Bran Oil
- Rose Hip Oil
- Zinc Oxide

Stock of these items changes regularly and are not typically accessible at markets. Please order in advance.

What's in the Toothpaste Tabs?

Xylitol - Xylitol is a natural sugar alcohol sourced from plants and trees and helps to add some sweetness to the toothpaste and helps clean

Erythritol - similar to Xylitol as it is also a sugar alcohol and also helps to clean teeth by breaking up cavity causing bacteria. It is also considered to be a great replacement for fluoride.

Xanthan Gum - Xanthan Gum creates that foaming effect that we all love. It's help to get all of the good stuff into those little cracks and crevices.

Calcium Phosphate - An important structural component of bones and teeth, added to help your teeth become stronger through remineralization.

Magnesium Stearate - This creates a lubricating effect in the formula to help keep our tablets consistent and reliable.

Stearic acid and Sorbitol - These ingredients also help to bind the tablet together and to add texture and consistency.

Calcium Bentonite - a naturally occurring clay that works as a gentle abrasive to help whiten teeth.

Cellulose - helps keep the tablets from crumbling

Nano-Hydroxyapatite - A form of calcium crystal that replaces missing sections of minerals that have dissolved out of the enamel or bone by bonding directly to the bone or tooth surface.

Menthol - Used in very small amounts to give you that great minty aftertaste

Elderberry - An herb with antiviral qualities that fight some viruses like the flu or common cold. Also used to add that fun pink coloring in kid's tablets.

Phthalate-free • Dye-free • Phosphate-free • Formaldehyde-free

Laundry Detergent

Toxin Free. Worry Free.

Powdered laundry detergent: washing soda, borax, and epsom salt.

Liquid laundry detergent:

High-Purity Water - charcoal-filtered, reverse osmosis, UV-sanitized

Cocamidopropyl Hydroxysultaine - Naturally derived from coconut, palm-free, biodegradable surfactant with high foaming.

Sodium C14-C16 Olefin Sulfonate - Derived from coconuts, palm-free, mild-surfactant helps to lift dirt and debris from surfaces, so the water can whisk them away. Biodegradable.

Cocamidopropyl Betaine - Naturally derived from coconut and palm-free. Biodegradable surfactant.

Coco-Glucoside - A plant-derived, biodegradable surfactant. Mild and safe for sensitive skin.

Sodium Gluconate - Natural mineral, helps grab onto and remove foreign contaminants.

Sodium Citrate - Natural mineral, helps grab onto and remove pollutants.

Vegetable Glycerin - Derived from vegetables. Biodegradable and helps the plant surfactants do their job.

Dimethyl 9-Decenamide - Plant-based, biodegradable nonionic surfactant that helps clean and removes grease.

Caprylyl Capryl Glucoside - Biodegradable plant-based surfactant.

Polysorbate 20 - Plant-based performance stabilizer. Helps in the spreadability of liquids and stabilizes the formula when adding essential oils and phthalate-free fragrances. Dioxane-free.

Caprylyl Glycol, Phenoxyethanol - Safe preservatives used sparingly, prevents bacteria from growing in container.

Cleaning Solutions

Multi-Purpose Cleaning Spray & Floor Cleaner:

High-Purity Water - charcoal-filtered, reverse osmosis, UV-sanitized

Capryl Caprylyl Glucoside - biodegradable plant-based surfactant

Alcohol (Ethyl) - Speeds drying.

Decyl Glucoside - plant-derived, biodegradable surfactant.

Sodium Gluconate - Mineral based. Helps grab and remove metals.

Sodium Citrate - Mineral based. Helps grab and remove minerals.

Citric Acid - Neutralized pH

Coco-Glucoside - plant-derived, biodegradable surfactant. (floor cleaner only)

Caprylyl Glycol, Phenoxyethanol -

preservatives used sparingly, prevents bacteria from growing in container (floor cleaner only)

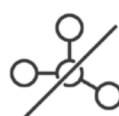

Natural, Vegan, Plant-based... What's the difference?

Terminology matters and we try our best to be accurate with it. All of our products are plant-derived and eco-friendly. This means everything is vegan unless otherwise specified, septic-safe or compostable, and doesn't have a negative affect on our environment.

Plant-derived doesn't always mean natural. Some of our products contain ingredients that, yes, come from plants, but have gone through refining processes that technically make them no longer "natural". Basically, if nature can't produce the ingredient without human intervention, it's no longer "natural" - but it still comes from a natural source AND is free from toxins, like carcinogens, that can disrupt the natural health and balance of our bodies.
